### Comments:

Ethyl alcohol 95% conforms to all US, British, European, and Japanese Pharmacopoeia, and Food Chemicals Codex standards, with the exception of alcohol strength, specific gravity, and density in the BP, EP, and JP. The specific gravity and density values in these references correspond to an alcohol strength of 96.0 to 96.6% in the BP, 95.1 to 96.9% in the EP, and 95.1 to 95.6% in the JP, therefore ethyl alcohol 95% will not conform to these standards by virtue of its lower minimum alcohol strength.
