MedStore **20% Off Sale** - GB-Magic™ Protein A/G Immunoprecipitation Magnetic Beads

GB-Magic™ Magnetic Beads coupled with Protein A and G in high density have been validated for IP/CoIP/Pull-down/CHIP

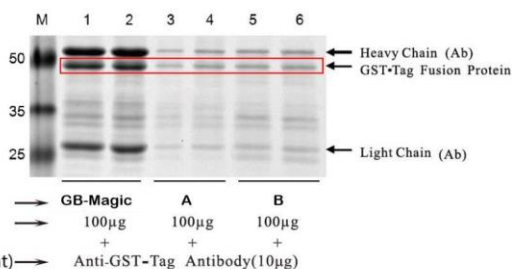

Benefits:

- ✓ **Low background** — little nonspecific binding and no need for preclearing
- ✓ **Reproducible** — uniform beads ensure the most consistent results
- ✓ **Highly sensitive** — ideal for ChIP and IP, of low-abundance proteins
- ✓ **Convenience** — <40 min protocol-no centrifugation or preclearing steps
- ✓ **Use Less Antibody** — smooth outer surface of the beads, reducing antibody cost.
- ✓ **Validated** — High performance for IP, Co-IP, pull-down, and ChIP assays; both for manual and automated protocols

Experiment 1: Immunoprecipitation of Protein HAS

Experiment 2: Immunoprecipitation of proteins with GST-Tag

MedStore **20% Off Sale-** GB-Magic™ DNA and RNA Beads

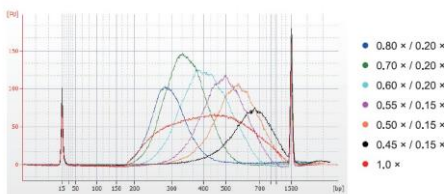

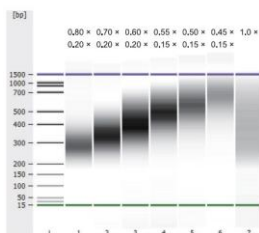

GB -Magic™ DNA Beads , Cat. # N411 for both size selection and DNA purification

- ✓ For DNA purification and size selection in NGS library preparation.
- ✓ Compatible with almost all library prep protocols provided by all manufacturers, including the AMPure beads
- ✓ For non-NGS application as well.

GB -Magic™ RNA Beads, Cat. # N412:

- ✓ Interchangeable with Agencourt[®] RNA Clean[®] XP Beads
